Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Protect Your Mail Order Products at a Lower Cost

The Rennco ProCommerce vertical bagging system utilizes flat stock material lined with bubble wrap to create custom right-sized packages for e-commerce applications.

Using pre-made bags that are too large leads to increased material and shipping costs. The Rennco ProCommerce bagging system eliminates the use of costly pre-made bags that are often oversized for the product.

The Rennco ProCommerce bubble mailer system provides added flexibility. It can run bubble mailing material or opaque mailing film, covering many packaging requirements of e-commerce packaging and shipping production.

Integrated Automatic Print & Apply Labeling System

Integrated with an ID Technology print and apply labeling system applies a shipping label to the package making it ready to ship.

An operator loads items into the film that has been centerfolded. Once all items are loaded, the opertor presses a palm button. A shipping label is printed and applied to the finished package - ready for transport to the end customer.

Please contact Pro Pac or call 888-318-0083 for your bagging equipment.
