Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

8-Station Rotary Blister Sealer

Starview ERB Series rotary type heat sealers are designed for medium to higher volume production requirements. These machines may be used for conventional carded blisters, full face blisters, half-clamshell styles, as well as applications using Tyvek, foils, and other heat sealable lidstock.

The standard sealers feature one sealing station with the remaining stations used for load and unload stations.

If your blister packages have only one or two distinct parts, the ERB4 and ERB6 has loading stations for one or two operators. If your packages have multiple different parts, the ERB8 sealer has more loading stations for additional operators or feeding systems.

Starview ERB rotary heat sealers are designed to include an optional automatic card feeding system and automatic package discharge system on most models. These may be self-standing or permanently attached depending on the model. A quick-change face plate mechanism as well as an adjustable sealing cylinder stroke options are offered to improve productivity and reduce set-up times.

Please [contact Pro Pac](#) or call 888-318-0083 for your blister sealing equipment.
