Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

## Form and Load Trays before Shrink Bundling

The Polypack TR/TE tray packaging machine series includes the TR all-in-one tray packing system that forms and fills corrugated trays and the TE stand-alone tray former. When integrated with a shrink wrapper, the Polypack TR provides a turn-key bundling solution for distribution ready packaging.

The Polypack TR/TE tray packaging machines add efficiency to any line. The Polypack TR is offered in intermittent or continuous motion configurations. As with all Polypack packaging solutions, this series of tray packaging machines can be highly customized to meet the specifications of your unique secondary packaging application.

## Polypack TR

The Polypack TR is an all-in-one tray packing machine consisting of both a tray former and a tray loader. Adjustments for different sizes of corrugated trays and/or product are quickly and easily made on the Polypack TR. The machine can achieve intricate folds on corrugated trays with finished edges for shelf ready packaging appeal.

The Polypack TR offers significant material cost savings compared to traditional regular slotted container (RSC) packaging.

### Features

Creates tightly packed trays to avoid product movement  
Available in heights varying from low wall to high wall  
Utilizes less corrugated material and glue than RSC

Produced packed trays that can be shrink wrapped for added protection

## Polypack TE

The Polypack TE is a stand-alone tray erector machine that forms corrugated trays with either glue or glue-less tabs. The folded walls on glue-less corrugated trays create double-strength walls and 45° chamfered display edge is ideal for club store trays and retail ready packaging.

## Specifications for TR & TE

Stainless steel main frame

Speeds up to 50 trays/minute

Nordson hot glue system

NEMA 12 control panel

208-575 volts, 3 phase, 50 or 60 hz

Pneumatic controls require 65-70 psi (5 bars) @ 10 cfm

Self-monitoring diagnostics
