Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Move Products from a Single to Multiple Lanes or from Multiple to a Single Lane

Shuttleworth line of diverters, diverting conveyors and dividing conveyors move round or odd-shaped products from a single lane to multiple lanes.

Diverting conveyors from Shuttleworth include a pattern forming machine to sort products from one lane to multiple lanes. Or these dividers can automatically divide products from one in-feed lane to up to 31 lanes.

Able to pattern form or divide products sequentially, Shuttleworth diverting conveyors are designed to perform sequential pattern forming, dividing, and line balancing.

With Shuttleworth dividers, your products are safely distributed to their proper location. To ensure product security and accuracy, these diverters are controlled by programmable logic controllers or external controlling devices. When your product shapes are round or odd-shaped, the diverting conveyor is able to use diverting technology to get your products on the right path in the most efficient manner.
