Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Perfectly Position, Orient and Rotate Products

Put products where they need to be with Shuttleworth rotating and orienting capabilities.

Shuttleworth designs product positioning, orienting and rotating solutions to provide quick, safe, and automated product handling efficiency.

Proper product orientation within your production line is imperative and ensures correct handling and processing. Whether your product needs turned, rotated, inverted, up-ended or positioned, Shuttleworth orienting systems will ensure your product is in the right position.

Shuttleworth's variety of slow or high-speed rotation capabilities accommodate specific application requirements. For slower to moderate rate applications, Shuttleworth provides in-surface or side mounted bump turns, lift and rotate devices or engineer a split-surface conveyor to achieve the desired orientation. For high-speed product rotating and orienting applications, the Shuttleworth Servo Star Wheel device can change product orientation 90 or 180 degrees up to rates of over 200 products per minute.

Please [contact Pro Pac](#) or call 888-318-0083 for your product handling equipment.
