Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

## Down-Stacking, Up-Stacking and De-Stacking Optimize Line Processes

Shuttleworth down-stacking, up-stacking and de-stacking devices help optimize production line processes.

Shuttleworth offers a line of product stacking devices to meet diverse challenges the line. When your production line needs quick, efficient devices to move, transport, organize, and stack your products, Shuttleworth has a variety of options.

### De-Stacking

Shuttleworth's uniquely designed de-stacking device easily and carefully removes a product from a stack without disrupting the stacked products. It takes away from the bottom of the stack to keep your stack nice and neat and ready for shipment. Other products may require containment of the stack and the shearing away of the bottom product by a product pusher, puller, flight bar, or stripping pins or lugs for example.

### Down-Stacking

With a unique combination of conveyors and devices, Shuttleworth down-stacking systems gently place products into the stack orientation needed without jeopardizing the product integrity - keeping product stacks in a concise, organized manner. This unique solution keeps your products safe and secure throughout the each stage of processing. When conveying, it's important to ensure products arrive safely at their predetermined destination.

## Up-Stacking

Shuttleworth's automated up-stacking devices gently stacks products vertically in preparation for case packing, shrink or stretch wrapping and cartoning applications. Shuttleworth's Slip-Torque technology enables the machine to gently stack a wide variety of products at needed speeds and rates, depending on the application. This up-stacker is ideal for organizing products for manual pack off. Concentrated accumulation and flexibility in design allows for multiple size products and quick changeovers.
