Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Consistent Patterned Product Flow

Each Shuttleworth Multi-Packer SmartFeed systems are designed to release a pattern of multiple products in time with a flighted or belted wrapper infeed. A series of product stops, or a combination of in-surface brakes with an adjustable overhead brake, controls the number of products released to the wrapper, cartoner or case packer.

Equipped with Shuttleworth's innovative Slip-Torque roller technology, the Multi-Packer SmartFeed provides low back pressure accumulation, allowing for gentle product handling while also properly spacing the product into the wrapper – minimizing the potential for product damage to occur. This will benefit the user with a highly-efficient packaging line running at peak performance.

Features & Benefits

Provides consistent patterned product flow to wrapper or cartoner

Anodized aluminum and stainless steel conveyor designs available

Easy integration with current packaging line

Slip-Torque surface allows products to accumulate without crushing or marring the product or primary packaging

Synchronized release of product prevents overfeeding of packaging equipment
