Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Wide Range of Control Options

Shuttleworth offers a wide variety of state-of-the-art electrical control options ranging from simple drive motors and sensors to turnkey electrical control systems. Partial or complete design and software development services are offered depending on customer wants and needs. Shuttleworth's electrical control systems comply with all pertinent international, national, local and industry standards and every effort is made to comply with individual customer electrical specifications including hardware, software structure and wiring practices.

Control systems run the range from stand-alone micro programmable logic controllers (PLCs) to sophisticated system architecture involving supervisory computers and PLCs with distributed input/output stations. When required, product routing and tracking is accomplished with either bar code or RF identification technology. Higher level control systems can include features such as graphical user interfaces, system diagnostics, alarm monitoring, data collection, and production reporting. Appropriate interfaces can be provided for customer supplied equipment and devices.

Features & Benefits

State-of-the-art motion controls system

Touch screen interface

Programmable servo setup to accommodate product variability with offset feature to improve the accuracy of product placement

Overall equipment efficiency (OEE) data capturing and reporting capabilities
