Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Safely, Quickly Open Conveyors

Shuttleworth gates are hinged sections of Slip-Torque conveyor that can easily be lifted, pivoted or slid open by operators for both routine access to and from work areas as well as for emergency escape.

Offered in 1.5- meter standard lengths, gates employ a gas cylinder lift assist and sensors that automatically shut down that section of conveyor.

Gates enable optimal use of manufacturing plant space. Saving floor space without sacrificing conveying technologies, this device ensures increased production rates and precision in each use. Your products will remain safe during each conveying experience. The lift gate flows well with conveyors and provides for efficient production.

Beneficial to your production room, a lift gate conserves space, and runs flawlessly. A lift gate is the perfect option for a smaller production room. It utilizes square footage in the most effective ways while giving you the extra conveying space needed.

Features & Benefits

Provides access for maintenance and safety protocols

Lift and movement assist devices allow easy of maneuverability

Safety locks and devices prevent potential machine and operator injury
