Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Push or Halt Even Heavy Products on a Conveyor System

SpanTech's ruggedly designed stops and pushers sort your products efficiently by ejecting them off of a conveyor, or halting them altogether. Move heavy products with ease using SpanTech pushers and stops.

Adaptable to many different applications, the pusher and stop station is an ideal solution for sorting specific product from your main conveyor flow. Its rugged construction is suitable for heavy products and ideal for product sorting, palletizing and product-reject systems.

Conveyor Stops and Pushers Features

Construction is suitable even for very heavy products.

Two pusher options: pneumatic cylinder and electric motor.

Additional bed section crossbars are used at pusher and stop locations.

Conveyor cannot have a moving side guide unless the entire chain is raised, and is limited to 6mm moving side guide.
