Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Open and Close

The Scirocco Pocket Bag machine produces packages with both the practicality of being reclosable and the benefit of long-term freshness.

The Pocket Bag machine creates packages with wrapping material made up of one or more layers of film that act as a gas barrier, and may also be stripped off, thereby keeping the package intact.

Marketing Oriented

The Pocket Bag package may be custom printed, including the rear of the package. This capability perfectly combines marketing and information requirements for food products.

Lowering Costs

The PFM Pocket Bag system reduces costs in three ways.

Sealing heavier materials often results in discards due to poor seals. The Pocket Bag machine is designed to use thinner barrier material without compromising the quality of the seals. Running thinner film typically means fewer discards, resulting in lower costs from less waste.

Thinner film typically costs less than thicker materials. The Pocket Bag system can create perfectly sealed packages with thinner film, lowering your material costs.

Thinner film seals with lower temperatures than thicker films. The reduced temperature of the sealing crimpers results in lower maintenance costs.

Features

Long Dwell transferring continuous motion transversal sealing system (PFM patent)
Available with 1, 2, 3 or 4 crimpers per shaft, according to the product and the required speed
The system guarantees perfectly hermetic seals for up to 200-250 packs per minute
Servo-Assisted operating system by means of brushless motors in direct electric axis
Touch screen controls and the possibility of online connection
Cantilevered machine construction with rounded corners, openable on all sides
The mechanical and electrical components are housed at the back of the machine
The front is free from obstruction and quick and easy to clean
Reel-holding shaft with pneumatic extension and disc brake system
Automatic film mark reel changing system with no reduction in machine speed
The sealing units can be removed from the machine in 10 minutes for routine workbench maintenance
Constructed in AISI 304 stainless steel
