Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Phase Feeding Eliminates Operator at Infeed

The Redpack P325E-PF phase feeding flow wrapper is designed for applications with products that can be automatically fed directly into the infeed of the wrapper. The P325E-PF then automatically spaces the product and conveys it into the flow wrapping module.

Phase feeding provided by the Redpack P325E-PF reduce costs and increases efficiency. No operators are required to feed the product onto the flow wrapping machine infeed. By avoiding double handling, products avoid potential damage. Reduced human intervention helps to improve hygiene.

Features

Equipped with independent drives synchronized through the servo-control system.

Machine base is manufactured from solid stainless steel.

Automatic feeder into flow wrapper.

Made of stainless steel.

Independent temperature control of the jaw heaters.

Universal integrated bracket for a thermal transfer printer.
