Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

## Vertically Place Large Threaded Caps onto Rigid Container

Inline Filling Systems 2-head automatic vertical cap placer is designed to vertically place a large threaded cap onto a rigid container and start the cap to a fully seated position on the container.

This type of machine is often necessary on cap sizes above 80mm and can reach speeds of 40 BPM on very large caps and containers when coupled with an inline cap tightener. This combination of machines has an economic advantage over expensive multi-head conventional chuck style capping machines.

## Features

Automatic vertical placer

Available with star wheel or timing screw push through

Dual head
