Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

## Small Foot Print Filler for Thin Liquids

This Inline Filling Systems single-head overflow filler uses an air diaphragm pump to provide semi-automatic operation. The fill is controlled by air switches and the pump is regulated by the supplied controls.

The system provides consistent fill volume without complete operator attention. This lower-cost choice filling machine can upgrade to fully-automatic.

The filling sequence is electronically controlled entirely by the filling machine. An operator is required only for handling the containers. This filler occupies a small foot print.

## Features

304 stainless steel tubular frame with NEMA 4X enclosures for full wash-down capability.

Filler frame top mounted supply tank with float switch control to maintain fill head pressure.

Constructed of stainless steel and stainless shrouded aluminum components where required for complete washdown capability.

Foot switch controlled to free operator's hands for bottle handling tasks.

Pneumatic operated nozzles (nozzles for sanitary applications also available).

Nozzle timing protocol is PLC controlled for high accuracy fills.

Automatic drip tray and supply regulation.

Precision manual bottle height adjustment.

Automatic drain and clean cycle.

Batch bottle counter.

Control panel uses a 40-character two-line digital display with multiple product profile menu.

Please [contact Pro Pac](#) or call 888-318-0083 for your liquid filling equipment.
