# Inline Filling Systems Shrink Sleeve Applicator

## At a Glance

- Tamper evident band around the top of a container
- Full or partial shrink sleeves with graphics
- A hand crank adjusts height from 36 to 52 inches

## Pricing

Call us at 888-318-0083

Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

## Simple Shrink Sleeve and Tamper Band Application

Inline Filling Systems shrink sleeve applicators and heat tunnels are used both for applying a tamper evident band around the top of a container or a full or partial shrink sleeve with graphics used as a label.

Tamper bands around the top of the container and cap are used not only for tamper evidence but also to conceal variations in fill heights of products that normally occur in glass bottles.

A shrink band system consists of both the applicator and a heat source. The right heat tunnel achieves consistent appearance of the shrink.

## Features

Floor stand mounted, and can be height adjusted from 36" to 52"

Sleeve material lay flat range: 15 to 110 mm with sleeve material thickness of 40 to 200 microns

Cap size range to 69mm

## Options

Print registration

Vertical or horizontal or T-Style perforation

Low film warning
