Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Stainless Steel Conveyors Built to Last

Volumetric Technologies gap transfer conveyors transfer your filled or empty containers from one standard conveyor to another by gripping the sides of the container as it is transferred. This unique gap transfer process leaves the bottom of the container open and available for either inkjet or laser code dating without stopping or slowing down the filling or capping process.

Volumetric Technologies also offers end-to-end transfer conveyors which transfer your filled or empty containers from the one table top conveyor to another. This is a simple and reliable method to conjoin multiple conveyors together.

Features

Adjustable widths for multiple containers
Stainless steel construction for the toughest environments
Variable speed

Options

Multiple machine frame options
Multiple chain / belt options
Different length options

Specifications

Power Requirements: Electric varies

Speed: Adjustable up to 60 feet per minute

Wash Down: Full wash down
