A-B-C 72SA Semi-Automatic Case Palletizer

At a Glance

- Operator simply positions cases, no lifting or bending
- Case feed from any direction for maximum flexibility
- Palletize cases, trays, display trays or totes

Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Semi-Automatic, an Affordable Upgrade from Hand Palletizing

The A-B-C 72SA simple and affordable semi-automatic palletizer makes it easy to upgrade your hand palletizing operation, without losing the flexibility of manual palletizing. This palletizer eliminates the bending and lifting associated with manual palletizing, reducing the risk of back injuries and resulting high insurance premiums.

Machine Features

Palletize cases, trays, display trays or totes.

Increase efficiency—product feed from any direction.

Eliminate bending and lifting to palletize cases.

Easily upgrade to automatic operation.

Benefits

Increase Operator Efficiency: No lifting, stooping or walking around the pallet is required to operate this case palletizer. Once a layer is formed, the operator simply presses the start button and the layer is palletized automatically.

Features Maximize Palletizing Production: Stable layer transfer is ensured by the stainless steel, tapered stripper plate. The elevator table is counterweighted and frequency-driven to remove load stress from the drive motor, ensuring smooth transport and longer motor life. It is supported by crossbar reinforcing beams to reduce case friction.

Square Layers Palletize into High-Quality Pallet Loads: A rear layer retainer plate and two side layer

squaring plates center each layer on the pallet. The layer is held firmly to retain it squarely during the deposit cycle. A low friction roller transfer table is available to allow easy handling of heavy and shrinkwrapped cases.

Designed for Your Needs Today and in the Future: If your needs change, this semi-automatic palletizer can easily be upgraded to automatic operation.

Options

Low friction roller transfer table to accommodate heavy or shrinkwrapped cases.

Upgrade to fully automatic operation.

Powered pallet discharge conveyor.

Machine Specifications

High Performance Features:

Heavy steel frame construction- 7 gauge, 3/16" steel, welded and bolted for strength

Stainless steel, reinforced elevator table with gravity design

Maximum tier weight 650 lbs.

Counterweighted elevator table eliminates drive motor stress

Stainless steel, tapered stripper plate for smooth load transfer

Rear layer retainer plate and side layer squaring plates for square pallets

Allen-Bradley PLC operation

IEC motor starters

Variable frequency motor drives
