Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Reduce Labor Costs

Rennco E-Commerce 301 packaging system eliminates the need for employees to handle bags and labels. A single operator only handles the product, not the packaging material. Less manual handling means greater overall packing-line efficiency.

Reduce Material and Shipping Weight Costs

Packaging mail orders with roll stock film instead of boxes and pre-made bags lowers dimensional weight (DIM) calculated shipping costs. Fulfillment centers can save as much as 50 percent on consumables by eliminating the need to purchase pre-made bags and shipping boxes.

The Rennco E-Commerce 301 bagging system minimizes film cost by forming optimally-sized bags around each order. This Rennco bagging system produces bags as small as 2 x 2 inches to as large as 18 x 24 inches that can be used for shipping consumer or commercial products.

Rennco packagers typically run centerfolded roll stock material. Use of the Rennco centerfolder device runs flat stock material commonly used for mailers and converts this film to centerfold prior to machine feeding.

Benefits

- Right size the package around products
- Easy to load for fulfillment operations
- Cost savings using centerfolded roll stock material over pre-made bags
- Minimize material used, dimensional weight freight costs are reduced

Easily integrates with ID Technology printer options
Customers have reached up to 30 packages per minute
Custom infeed options available

Integrated Automatic Print & Apply Labeling System

Integrated with an ID Technology print and apply labeling system applies a shipping label to the package making it ready to ship.

An operator loads items into the film that has been centerfolded. Once all items are loaded, the operator presses a palm button. A shipping label is printed and applied to the finished package - ready for transport to the end customer.

Tape Strip for Simple Returns

Another unique feature on the system is the addition of a tape strip on the inside of the package. This strip is added to the flat stock material (with the covering still on it) positioned on the inside of the package. This allows customers to re-use the bag for returns, if needed, by turning the package inside out and re-sealing with the tape strip.
