Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Integrated Automatic Print & Apply Labeling System

Integrated with an ID Technology print and apply labeling system applies a shipping label to the package making it ready to ship.

An operator loads items into the film that has been centerfolded. Once all items are loaded, the operator presses a palm button. A shipping label is printed and applied to the finished package - ready for transport to the end customer.

Reduce Material and Shipping Weight Costs

Packaging mail orders with roll stock film instead of boxes and pre-made bags lowers dimensional weight (DIM) calculated shipping costs. Fulfillment centers can save as much as 50 percent on consumables by eliminating the need to purchase pre-made bags and shipping boxes.

The Rennco E-Commerce 301 bagger minimizes film cost by forming optimally-sized bags around each order. This Rennco bagging system produces bags as small as 2 x 2 inches to as large as 18 x 24 inches that can be used for shipping consumer or commercial products.

An integrated print and apply labeling system creates a complete packaging integrated system for e-commerce mail order production.

Benefits

- Right size the package around products
- Easy to load for fulfillment operations

Cost savings using centerfolded roll stock material over pre-made bags
Minimize material used, dimensional weight freight costs are reduced
Easily integrates with ID Technology printer options
Customers have reached up to 30 packages per minute
Custom infeed options available
