Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Bag Large Cylindrical Products in Bags Up to a 24" x 65"

Ideal for packaging products in bags up to a 24" x 65", the Rennco 501 Vertical L-Bar sealer is one of the largest vertical baggers available.

Substantially reduce material costs by using roll stock film instead of pre-made bags. The Rennco 501 SF is specially designed for cylindrical products and other products that are longer than they are wide - products like stacks of cups, bolts of cloth, curtain rods, etc.

The 501 can utilize a trim wind up for scrap removal or can be configured without trim where scrap is left attached to the package instead of being waste. Light screen cycling mechanism and perimeter interlocked guarding come standard.

Optional features on this bagger include servo film feed, trim break detection eye, hole punch for air release, pin perforator assembly along with many other options to improve your production.

Benefits

Versatile packager for large products

Available in three different size configurations up to 24" x 65" in length

User-friendly HMI and programmable changeover

Significant cost savings over pre-made bags

Easy to operate with quick, easy changeover

Easily interfaced with infeed systems

Widest range of features and options

Features

Constant coated seal system
Tool-less film guides
Leg and height adjustments
Casters
Light screen cycling mechanism and perimeter interlocked guarding
Trim wind up
