Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Intermittent-Motion Total Closure Bundling System

Polypack FH shrink bundlers are intermittent-motion, total closure shrink wrap machines.

Using a forming head to multi-pack a variety of products, shrink-wrapped bundles are sealed on all sides for increased product protection. Total closure multi-packs are more resistant to mishandling and warehouse conditions than bulls-eye closure. Total closure present a nice, continuous surface for retail packaging applications.

Run a Variety of Films

Polypack FH retail shrink bundlers provide complete enclosure of bundles with polyethylene, polyolefin and PVC films. These shrink wrap machines can also handle print registered film for retail packaging.

Features

Heavy-gauge, stainless steel main frame

Forming plow uses a single roll of film and produces zero film waste

Run clear, random printed or print-registered film

Self-leveling, Teflon coated hot knife sealbar assembly

Engineered as a single unit with integrated double insulated tunnel to reduce energy consumption

Polycarbonate enclosures ensure safety and easy access to machine components

Quick changeovers

PLC touchscreen interface

Intermittent motion sealing with total closure wraps

Automatic product collation

Forming heads/plows contain no moving parts; simple & reliable

Inline or side infeed production

Collation assemblies divide, reorient, rotate, upend, group, or stack products

Production speeds up to 15 wraps/min single lane and 30/minute in dual lane

Compatible with LDPE, PVC, and PO films

Printed film capability (optional)
