Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Intermittent-Motion Total Closure Bundling System

Polypack FIL shrink bundling machines are intermittent-motion total closure shrink wrappers that use a forming head to wrap products with rectangular or round profiles.

The FIL bundler can be designed to run everything from small trays to 12 foot or longer rolls. The package is sealed on both sides and shrunk for increased product protection. Total closure wraps are more resistant to mishandling and warehouse conditions. These bundled packages present a clean, continuous surface without seals obscuring the graphics and branding.

Bundle a Variety of Products with a Variety of Films

Polypack FIL shrink packaging machines are designed to provide complete enclosure of bundles with polyethylene, polyolefin or PVC films. These machines can also run print-registered film for retail packaging. These shrink packaging machines are available at speeds of up to 25 cycles per minute and are available in horizontal and vertical sealbar configurations. Automatic collation modules are available for orientation, rotation, and stacking. These shrink packaging machines easily handle large industrial products, consumer products, food and beverage containers, and much more.

Features

- Intermittent motion machine for total closure wraps
- Automatic inline production
- Production rates up to 25 cycles per minute

Horizontal or vertical seal options

Automatic product collation, orientation, rotation & stacking

Wraps individual products with round or rectangular profiles

Wrap products from small trays up to 12 foot or longer rolls

Capable of running print registered film for retail packaging (optional)

Heavy gauge, stainless steel main frame

Forming plow uses a single roll of film and produces zero film waste

Run clear, random printed or print-registered film

Self-leveling, Teflon-coated hot knife sealbar assembly

Engineered as a single unit with integrated double insulated tunnel to reduce energy consumption

Polycarbonate enclosures ensure safety and easy access to machine components

Quick changeovers

PLC touchscreen interface
