Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

IL Series Intermittent-Motion Bulls-Eye Shrink Bundling

Polypack IL intermittent-motion inline shrink bundlers are designed to provide a bulls-eye wrap to products longer than 4 inches. These shrink wrap machines have belt-to-belt transfers, controlled by motor inverters for positive transfers. The IL series shrink wrapper can be installed at the end of a tray multi-packer to shrink wrap each tray after they are formed and loaded.

These shrink wrap machines are available as stand-alone systems that can either be handloaded or fed by an existing conveyor. The IL series machines are also available with a wide array of product collation modules as well as a pad feeder to create pad-supported shrink multi-packs.

Features

25 packs per minute

Intermittent motion shrink wrapping machine

Ideal for shrink wrapping trays and larger, stable products

Low friction, self tracking infeed and transfer conveyors

Low height, side mounted film cradle

Energy efficient shrink tunnel

Available as a continuous motion, high speed model (CMS Series)

CMS Continuous-Motion Bulls-Eye Shrink Bundling

Polypack CMS continuous-motion seal bar shrink bundlers are designed to provide high-speed bulls-eye

wraps to products longer than 4 inches. These shrink wrap machines have positive belt-to-belt transfers that are controlled by motor inverters. The CMS series shrink wrap machine can be installed at the end of a tray multi-packer to shrink wrap each tray after they are loaded and formed.

These machines are available as stand-alone systems that can either be handloaded or fed by an existing conveyor. The CMS series machines are also available with a wide array of product collation modules as well as a pad feeder to create pad-supported shrink multi-packs.

Features

55 packs per minute

Heavy-gauge, stainless steel main frame

Self-leveling, Teflon coated hot knife sealbar assembly

Pre-programmed acceleration and deceleration for smooth operation

Self-adjusting solid stainless steel rod tunnel conveyor (no belts or coatings)

Low-level, side-mounted film positioning for quick and easy threading

Engineered as a single unit with integrated double insulated tunnel to reduce energy consumption

Polycarbonate enclosures ensure safety and easy access to machine components

Quick changeovers

PLC touchscreen interface
