Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Orient Your Labels for Better Shelf Appeal

Polypack LO label orientation systems use an electronic eye and a motorized wheel to rotate products to a specific point. The orientation system rotates the product according to their label so that they are all facing in the same direction in the multi-pack, giving products their maximum shelf appeal.

The product orientation system can be used to rotate cans with handles, such as those found on paint cans. To facilitate the scanning of products, this system can rotate the product to position the UPC codes in a more accessible manner.

Products stand out more with label orientation, uniform multipacks look clean and really show off the products.

Available as stand-alone units, or installed on the infeed of a shrink bundling system.

Features

Produces uniform retail-ready bundles and multi-packs that look clean and show off product

Ideal for club store retail ready packaging

Can be implemented on all Polypack equipment

Shelf ready multi-packs with labels facing outward

Ideal for club store retail packaging

Available at speeds up to 60 packs per minute
