Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Wrap Individual Products and Collate Multi-Packs into Bundles

Polypack PH shrink bundlers use a main pusher and seal bar designed for wrapping individual products as well as for collating products into multi-pack configurations.

The PH shrink bundling machines are available with various infeed and collation modules as well as an integrated pad dispenser to create pad-supported shrink packs.

When necessary, the Polypack PH shrink bundler uses gates, barriers and decompression plates to control the backpressure of products entering the machine, which ensures smooth product flow throughout the entire shrink wrap process.

The versatile Polypack PH shrink bundling systems have a self-adjusting, solid stainless steel rod tunnel conveyor, which means no belts and no coatings. With no change parts these machines are durable, long-lasting, and easy to change over and maintain.

Polypack PH Series Key Points

- Inline, offset, or side infeed
- Optional dual lane (PH)
- Open-sided (bullseye) enclosure
- Dual-roll LDPE
- Optional cradle with spare roll
- Horizontal seal bar

Features

- Intermittent-motion sealing for bulls-eye/sleeve wraps
- Motorized pusher assembly transfers products to wrapping section
- Back pressure controlled by gates, barriers and decompression plates
- Various collation modules available (dividing, reorientation and stacking)
- Self-monitoring diagnostics available
- Wrap up to 30 bundles per minute in single lane, and 60 per minute in dual lane
- Stabilizing modules and guides for unstable products
- Heavy-gauge, stainless steel construction
- Self-leveling, Teflon-coated hot knife sealbar assembly
- Pre-programmed acceleration and deceleration for smooth operation
- Self-adjusting solid stainless steel rod tunnel conveyor (no belts or coatings)
- Engineered as a single unit with integrated double insulated tunnel to reduce energy consumption
- Polycarbonate enclosures ensure safety and easy access to machine components
- Quick changeovers
- PLC touchscreen interface

Options

- Various infeed modules
- Stabilizing modules and guides for unstable products
- Collation modules for dividing, reorientation, and stacking
- Integrated pad dispenser to create pad-supported shrink packs
