Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Quickly Shrink Bundle Tube Products in Multi-Packs

Polypack Tube shrink bundlers shrink wrap tube products in 3-packs, 4-packs or 6-packs with or without product inversion.

These specialized Tube shrink bundlers utilize Polypack's patented pick-and-place technology to pick up tubes and place them directly onto the film for shrink wrapping. This system eliminates any additional transfers, making it the ideal solution for these hard-to-handle containers.

Polypack's pick-and-place system operates at speeds up to 180 tubes per minute, and can also be used to handle pouches and lightweight bags.

Add an integrated case packer to complete the line.

Features

Package tube products in straight or inverted configurations

Available in single lane or dual lane at speeds up to 180 per minute

Reduce packaging costs, space and labor costs by eliminating chipboard and corrugated dividers inside a master case

Create compact bundles by inverting tubes and increase the bundle's rigidity

Automatic adjustments provide for quick & easy changeovers

Patented pick & place system makes for a one time transfer process

Shrink wrap at speeds up to 180 tubes per minute

Heavy 11 gauge stainless steel construction

Nema 12 control panel

Stainless steel bucket conveyor (no belts or coatings)

Engineered as a single unit with integrated double insulated tunnel to reduce energy consumption

PLC touchscreen interface

Optional integrated case packer loads shrink wrapped tubes into a pre-erected RSC for distribution
