Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Film Stand with Dual Film Loading Stations

Tripack offers two alternate film stand options for Tripack HSA-245, HSA-250, HSA-405, HSA-410 applicators.

Both the IFS and RFS film stands allow the operator to change rolls from the operator side of the machine, reducing the amount of times the operator needs to access the back of the machine.

Tripack IFS In-Line Film Stand

An in-line film stand places the rolls of film directly above the product conveyor to reduce the amount of floorspace needed for the machine. It also allows the operator to change rolls from the operator side of the machine, which reduces the amount of times the operator needs to access the back of the machine.

Features of the IFS

In-line placement

Dual-film loading station

Low film and no film technology to eliminate re-threading process

Optional: Operator splice table and film-loading station

Tripack RFS Remote Film Stand

A remote film stand capable of marrying up with any of our high speed sleeve applicators. It also allows the operator to change rolls from the operator side of the machine, which reduces the amount of times the operator needs to access the back of the machine.

Features of the RFS

360° placement

Stainless steel frame with adjustable feet and casters

Dual-film loading station

Low-friction bridge to applicator

Zero-tension film air box

Powered film unwind

Operator splice table and film loading station with fold away design

Low film and no film technology to eliminate re-threading process
