Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Starview SDC Series combination slitting and die cutting machines are a cost effective way to trim skin packaged products. These machines eliminate the use of individual steel rule dies for each different package configuration.

The SDC Series features an intermittent motion infeed conveyor to transfer skin boards to the die cutting and slitting area. Circular cutters running against a hardened steel roller are used to slit parallel to the movement of the skin board. A pneumatic press activates the cross cutting perpendicular to the movement of the skin board. The interval at which this cut is made is programmable from the touch screen operator interface panel.

These automatic slitting die cutting machines utilize photocells and clear polycarbonate guards for operator safety. To prevent damage to the cross cutting knife, the SDC Series machines also utilize photocells to detect products that may be in the cutting area.

Features

Effective for trimming skin boards where it is desirable to trim packages with product facing up

Available with slitting wheels for cutting or perforating

Cross-cut may be straight or rounded corners and can include common hang hole styles

Small footprint conserves floor space

Two standard machine sizes available

Quick changeover of cross cut from Touch Screen and moveable slitters mounted on rail

Heavy-duty industrial design floor model machine

Options

Additional slitting heads for straight or perforated cutting
Longer than standard infeed and outfeed conveyors
