Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Protect All Six Sides of a Pallet Load, Increase Up-Time, Lower Material Costs

In certain industries, especially printing, total six-sided protection of pallet loads is desired for total product protection and to lock the load effectively to the pallet.

Six sided stretch wrapping provides a cost-effective alternative to steel or poly strapping. Eliminate the high cost, high-maintenance headaches, and recycling issues of strapping with the Orion Axis.

The Orion Axis system combines a large ring Constellation orbital wrapper with an FA (or MA) automatic stretch wrapping system. Customers have realized greatly increased uptime while dramatically lowering total pallet packaging costs with this system.

Operation

Pallet loads of printed material are first stretch wrapped on an Orion FA-44 automatic system. Then the load is conveyed to an Orion Constellation orbital wrapper. The orbital wrapper with a 90" ring is large enough to handle a full sized pallet load wrapping over the top and under the bottom, thus locking the product to the pallet.
