Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Top Sheet Provides Total Load Protection During Stretch Wrapping

The top sheet dispenser applies the top sheet providing total load protection.

The Top Sheet Dispenser applies the top sheet of stretch wrap after the initial wrap, but before the final wrap forming a sandwich effect to effectively protect the load from dust, dirt and moisture.

After the initial wrap, the top sheet dispenser descends and the top sheet is applied then cut via an impulse hot wire. The mechanism rises. A top stabilizer lowers to hold the top sheet down while the carriage begins its rotation again and wraps the top sheet to the load. The top sheet has been applied between the layers of film providing total load protection.

Please [contact Pro Pac](#) or call 888-318-0083 for your stretch wrapping equipment.
