Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Precise Robotic Corner Board Placement

The Orion RCBA Robotic Corner Board Applicator is the fastest and most efficient way to apply corner boards to pallet loads. Using robotics to pick and place the boards vastly increases the precision and simplicity of the process as compared to systems that place boards by mechanical means.

Corner boards are attached to loads on the infeed section while transporting in to the wrapping area. Attachment methods can be tailored to your specifications. Popular methods are using hot melt glue or nitrogen charged adhesive to produce a foam type adhesive for protecting the corrugate from damage when the boards are removed.

This corner board system can be designed for your exact requirements and provide you with a packaging system that will save time, labor and cost.

Please [contact Pro Pac](#) or call 888-318-0083 for your stretch wrapping equipment.
