Many options are available. Complete details will need to be finalized to determine requirements and final system costs. Work with your Pro Pac representative to build this machine to your specifications.

Quickly Fill Parts that Cannot Flow through a Feed System

Though the Weigh Right HF-1 hand feed scale may not be considered automation, but it can run faster and more accurately than other entry level automatic scale solutions.

The HF-1 is versatile to handle small pieces or larger pieces and changeover can be accomplished in minutes.

The HF-1 scale is ideal for bulky non-free-flowing products like plastic parts, hardware, pet treats, pre-packed pouches or packets - and other products that cannot be handled well by a vibratory feed system.

The HF-1 scale is also gentle. This scale gently provides a low drop into the package, and products are gently controlled by the operator into the weigh bucket.

The operator can also provide a last-minute inspection before the product goes into the final package ensuring quality for your customer.

Short Runs, Quick Changeover

The Weigh Right HF-1 is ideal for productions that package a lot of short runs of different products requiring quick changeover. The HF-1 is also designed for application that fill into multiple types of packages including bags, cartons, cups, jars, and boxes.

Benefits of the HF-1 Hand Feed Filler
